Mnenje laične javnosti glede izvajanja ter plačevanja storitev farmacevtske skrbi v Sloveniji

Public view on performance and willingness to pay for pharmaceutical care services.

Mitja Kos

Povzetek: Namen raziskave je bil ovrednotiti mnenje laične javnosti glede izvajanja ter plačevanja storitev farmacevtske skrbi v Sloveniji. Po pošti smo naključno izbranemu vzorcu slovenske populacije (starost ≥ 18 let), poslali 1100 vprašalnikov. Po mnenju laične javnosti (odziv=21%) se storitve farmacevtske skrbi v Sloveniji še ne izvajajo v zadostni meri kljub temu, da obstaja velika verjetnost uporabe takšnih storitev. Magister farmacija v lekarni je prepoznan kot kompetenten strokovnjak, ki bi lahko izvajal nadgradnje storitev iz obstoječe prakse. Obenem je večina elementov farmacevtske skrbi prepoznana kot relativna novost med storitvami slovenskih lekarn. Podobna stališča so anketiranci izrazili tudi za paket storitev farmacevtske skrbi, ki so ga nekateri pripravljene plačati tako preko neposrednih plačil: delež pripravljenih plačati je 22,6% in sicer mediano 30 EUR na letni ravni; kot preko povišanja premije zdravstvenega zavarovanja: delež pripravljenih plačati je 37,1% in sicer mediano dodatnih 6 EUR na mesečni ravni.

PhC services not provided in sufficient manner

high probability to use them
