## Development of Competency-based Pharmacy Education

Education and training of pharmacists requires the development of knowledge, skills and attitudes, that prepare students for their professional role in healthcare. Course participants will become familiar with the principles of competency-based curriculum design and with the construction of active learning modules. They will learn how the development of professional skills can be stimulated and how students can be prepared for their working life in a continuously changing world.

Education and training of pharmacists requires the development of knowledge, skills and attitudes that prepare students for a professional role in healthcare. Recently a European Pharmacy Competences Framework (EPCF) was published, which can be used as a tool for redesigning or restructuring pharmacy curricula using the principles of competency-based education. Building a competency-based curriculum is, however, not an easy task.

This course is intended to assist pharmacy teachers and curriculum developers to become familiar with the principles of competency-based curriculum design and with the construction of active learning modules, which can be incorporated in their own curriculum. Special attention will be given to problem-based, project-based and enquiry-based learning and to incorporation of professional development of students. Participants are expected to take an active role in the course by bringing in cases from their own teaching experience.

All course instructors have at least a 10-year experience in developing innovative courses and curricula in the pharmaceutical field at the undergraduate, graduate and postgraduate level. The course is organized in collaboration with the European Association of Faculties of Pharmacy (EAFP) and the Phar-QA consortium.

### TARGET GROUP

The course is primarily intended for faculty members (teachers, programme leaders), staff developers and other professionals, who are involved in the development and/or quality enhancement of curricula or courses in Pharmacy Schools at the undergraduate, graduate and postgraduate level.

### COURSE AIM

The aim of the course is to provide participants with a working knowledge for the development of a competency-based pharmacy curriculum. A secondary aim is the formation of a network of pharmacy education professionals.

<b>COURSE LEADER:</b>	dr. Andries S. Koster
<b>PERIOD:</b>	23-27 July 2018
<b>COURSE FEE:</b>	€ 600 (Course + course materials) + € 200 (housing)
<b>MORE INFORMATION:</b>	<a href="http://www.utrechtsummerschool.nl">www.utrechtsummerschool.nl</a> (Course code M06)
